                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         plants through seeds called apomixis, by transgenic expression of a gene encoding a protein acting in the signal transduction cascade, triggered by Somatic Embryogenesis Receptor Kinase (SERK). The protein physically interacts with SERK, that is involved in the formation of extraneous embryos from sporophytic cells, which can result in apomictic seeds. This method is useful for increasing vegetative reproduction in vivo through seeds or in vitro by somatic embryogenesis.

The present amino acid sequence is the SERK-interacting protein #1, isolated from clone 3A35. It is obtained by RT-PCR amplification of early stage Arabidopsis sliquer RN. It is a member of the family of Squamosa-promoter Binding Protein (SBP) transcription factors, after binding of ligand, followed by nuclear translocation of the factors and binding of ligand, followed by nuclear translocation of the factors and binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Increasing vegetative production of a new plant generation through apomixis, comprising transgenically expressing a gene encoding a protein acting in the signal transduction cascade triggered by the Somatic Embryogenesis Receptor Kinase -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The patent discloses a plants through seeds ca

```

(first entry)

Arabidopsis thaliana protein fragment SEQ ID NO: 26027.

Protein identification; signal transduction pathway; metabolic hybridisation assay; genetic mapping; gene expression control; termination sequence. pathway; promoter;

Arabidopsis thaliana.

                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                         The present invention relates to novel plant transcription factors from Eucalyptus grandis or Pinus radiata. The present sequence is one such transcription factor. The transcription factor may be used to produce a plant having modified gene expression such as a woody plant e.g. a eucalyptus, pine, acacia, poplar, sweetgum, 'ceak, or mahogany species or to modify the activity of a polypeptide in a plant. The transcription factors of the present invention are members from the following families of regulatory proteins: bZIP, bZIP family of G-box binding factors, basic helix-loop-helix zipper, homeotic/homeodomain/homeobox/MADS, homeodomain zipper, LIM domain, AP2 and EREBS, zinc finger domains of type 2 Cyb2His2, CCAAT box elements and MYB.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated polynucleotide encoding a plant transcription factor for producing a plant e.g. a woody plant, preferably eucalyptus or pine, having modified gene expression or modified activity of a polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (GENE-)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    d. No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2040

ALIGNMENTS

SEGULT 1
Sequence 2, Application US/09839185
Patent No. US2002069433A1
Patent No. US200206943A1

GENERAL INFORMATION:
APPLICANT: Schmidt, Eduard Daniel Leendert
De Vries, Sape Cornelis
Hecht, Valerie France Gabrielle
TITLE OF INVENTION: Apomixis Conferred By Expression of SERK

NUMBER OF SEQUENCES: 18
CORRESPONDENCE ADDRESS:
ADDRESSEE: Syngenta Patent Dept.
STREET: 3054 Cornwallis Road
CITY: RTP
STATE: NC
COUNTRY: USA
ZIP: 27709
COMPUTER READABLE FORM:
MEDIUM TYPE: Ploppy disk
COMPUTER READABLE FORM:
MEDIUM TYPE: Ploppy disk
COMPUTER IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.25
CURRENT APPLICATION NUMBER: US/09/839,185
FILING DATE: 19-Apr-2001
CLASSIFICATION: -Unknown>
AFTORNEY/ACENT INFORMATION:
NAME: Meigs, J. Timothy
REGISTRATION NUMBER: 38,241
REFERENCE/DOCKET NUMBER: S-30683A
TELECOMMUNICATION INFORMATION:
TELEPHONE: 919-541-8587
INFORMATION FOR SEQ ID NO: 2:
SEQUENCE CHARACTERISTICS:
LENGTH: 375 amino acids
TYPE: amino acids
TYPE: amino acids
TYPE: protein
HYPOTHETICAL: NO
ANTI-SENSE: NO
